

1. This is how your Roldos arrive. Lift the first undercarriage from the stack and place it on the ground. Put the other components on top one by one as illustrated in 2 and 3.

2. Follow steps A to D. After D, repeat steps B to D until the Roldo has 4 storeys. Always strengthen the Roldo by placing a B component on top of the cardboard of the fourth storey.

3. Each storey can be assembled in four different ways. Build up the Roldo as you wish by choosing the form best suited to your purpose. Method B, for example, is ideal for storing books for ongoing accessibility. Method A offers protection to goods not needed immediately.
