

# INSTRUCTIONS for use

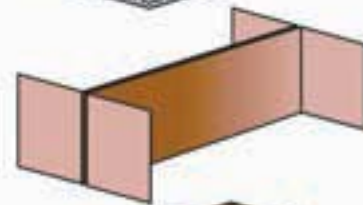

This is how the Roldos are delivered to you. Lift the first undercarriage off the stack and place it on the floor. Place the other elements on top of this one by one, as shown under 2 and 3.

1

Follow steps A - D. After having completed step D, repeat steps B - D until the Roldo is 4 layers high. So as to increase stability, always place a B-rack on the cardboard of the fourth layer.

A

3

There are four ways to arrange a layer. Arrange the Roldo according to your own wishes, and choose a version that best suits your purpose. Version B for instance is extremely suitable for storing books that need to be kept accessible, while version A is suitable for items that are not immediately needed.
